

BEFORE YOU GO

Try to fly direct and stay close to venues to save time and CO₂

DID YOU KNOW? Carbon emission mostly occurs during take-off and landing!

You can help the planet by checking that taps are not dripping, lights are off and the power is disconnected (not on standby)

DID YOU KNOW?

In a day, dripping taps can waste 46 liters of water, enough drinking water for 13 people!

Lighting accounts for roughly 15% of electricity use and 5% of greenhouse gas emissions!

Using LED lighting, with longer shelf life, can save 85% in electricity consumption!

Installing motion sensors can save 20-40% of lighting energy consumption!

Getting into the habit of taking a reusable shopping bag, water bottles and batteries makes life easier for you and for the planet!

DID YOU KNOW? There are 5 trillion pieces of plastic floating in the oceans and into the food chain!

If you can take less luggage, you save weight, space and reduce CO₂

DID YOU KNOW? Reducing your luggage by 15kg can save 100-200 kg of CO₂ emissions on a 4 hour round-trip flight!

Try to save space to buy locally made souvenirs to support the local economy!

ON YOUR WAY HOME

It feels great to leave your footprints on the beach, not your waste

DID YOU KNOW? Waste causes major damage to rivers, seas, the coastline and their wildlife!

You can take memories anywhere, but shells, corals, plants, seeds or other natural resources are best left where you find them

DID YOU KNOW? Removing elements of fragile ecosystems can cause damage long after you leave!

If you remember to remove packaging from purchases, you can save space and weight

Try to check luggage and laundry for bugs and small insects

DID YOU KNOW?

Nearly a third of the half a million alien species spread to other ecosystems are pests, which cause over \$1.4 trillion of damage to agriculture, forestry and the environment!

Consider donating unused local currency
